DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claim 12 is rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for copolymerizing trioxane in the presence of dioxolane using a boron trifluoride initiator, does not reasonably provide enablement for copolymerizing trioxane with any cyclic ether using any cationic initiator. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims. See page 4, lines 10-19 and the Examples.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 12 is rejected under 35 U.S.C. 102(b) as being anticipated by Walling et al. 3,027,352, Walker 3,235,531, Kakos, Jr. 3,484,399, Wolters et al. 3,743,614 or Collart et al. 4,772,662.
5. Walling et al. disclose applicants' composition and process in Example 8. Walker teaches 6000 grams of trioxane reacted with 300 grams of dioxolane in Example

Art Unit: 1714

1. Kakos, Jr. recites 0.1 to 15% oxyethylene in the copolymer, encompassing applicants' claimed range. Wolters et al. make a copolymer from 96% trioxane and 4% 1,3-dioxolane. Collart et al. reveal between 0.1 and 50 mole% comonomer relative to the trioxane present in column 3, lines 30-39. Applicants' claims are not novel. All properties are inherent in the composition.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter Szekely whose telephone number is 703-308-2460. The examiner can normally be reached on Tuesday-Friday 7:00 a.m.-5:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan can be reached on 703-306-2777.
